

Why do we need a Digital Signed document? How to get Digital Signed Certificate (DSC)?

DigitalSky platform requires organizational users to upload documents which are signed using the DSC issued to them. This is required to meet the requirements of self-certification for the uploaded documents. Please refer the below guidelines for obtaining the DSC and signing the documents digitally.

1. Documents must be Digitally Signed by the applicant using the DSC issued to organization.

Wherever applicable, the system requires the document being uploaded, to be digitally signed by the applicant using the DSC issued to organization. The DSC should be issued to organization by any of the licensed Certifying Authorities authorized by India's root CA. List of licensed CA's can be found at https://cca.gov.in/licensed_ca.html. Even the documents issued to the user in an electronic format and already having a digital signature can also be digitally signed again using the DSC issued to the user. Alternatively, user can also take a print of the documents issued to them in electronic format (example CIN), scan them as pdf and then sign using their DSC as explained above.

2. DSC suitable for Organizations

All the users registered in the system as organizations should obtain Class 3 DSC issued to organizations. Please ensure that the organization name to which the DSC is issued should exactly match the name of the organization being used on DigitalSky platform. This check is done by comparing the O attribute present in the digital certificate.
